CCS

Precision pulsed laser diode driver and TEC controller

with Integrated Butterfly Mounting Sockets and USB

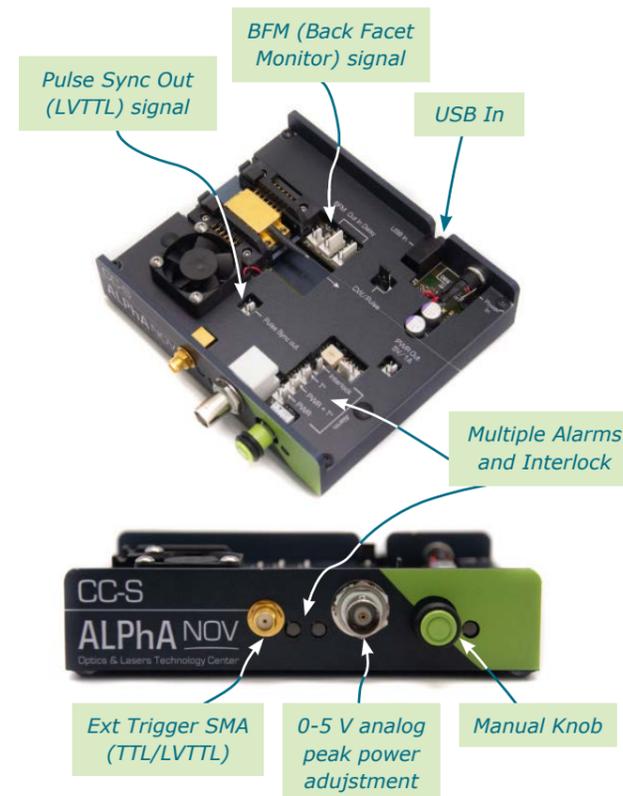

Designed for precision seed pumping applications, ALPhANOV laser diode pulsing control electronics and mounting modules are optimized for single-shot to CW performance with pulse width down to <math><1\text{ ns}</math>. These complete control electronics and mounting modules deliver precision pulses which are generated internally by an on-board pulse generator, or on demand from an external TTL signal.

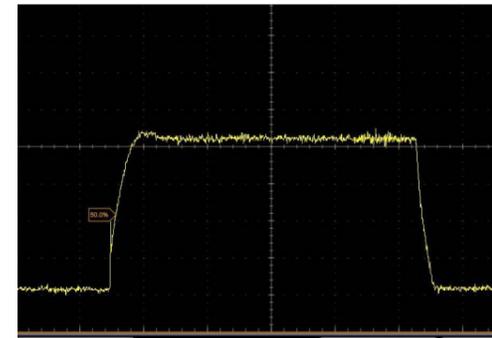

Key features:

- Up to 1500 mA peak current (3500 mA or 9000 mA with optional versions)
- User set pulse width from 500 ps to CW
- Up to 4 MHz repetition rate (optional 10 MHz / 250 MHz)
- Integrated TEC controller
- Down to <math>< 500\text{ ps}</math> rise/fall time
- USB, manual, & analog [0-5 V] signal peak power adjustment
- Smart control (USB interface to drive simultaneously several modules from ALPhANOV's laser electronics series)
- Compatible with any laser diode types (with or without mounting sockets) : TO, VCSEL, Butterfly type 1, type 2 etc.

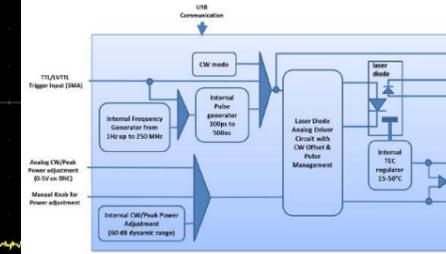

New ! HPP (High Pulse Performance) version:
